to keep running your applications smoothly and securely
- CMS & Admin Panels

Laravel-based CMS, admin dashboards, and content workflows
- Payment Gateway Integration

merchant/payment UI integration and QR/UPI-based flows
- API Integration

third-party, social, and backend API integration for frontend apps

CLIENT PROJECTS

Project 1: – CareersNest

Description:

CareersNest is a job portal for job seekers and recruiters, with background verification and AI-based resume screening features.

Client:

CareersNest Pte Ltd

Technologies:

React JS, Laravel, MySQL, PostgreSQL, Laravel AI SDK

Role:

PHP - Laravel Developer

Responsibilities:

- Received the brief from the client and architected the features and scope of the project.
- Developed the frontend of the project using React JS and integrated it with backend APIs.
- Created Admin, Company, and Candidate dashboards with different roles and permissions.
- Deployed securely on our VPS with SSL and other security best practices.
- Worked on SEO and performance optimization of the website for better reach and user experience.
- Implemented an AI-based resume screening feature using Laravel AI SDK for better candidate selection.

Project 2: – United Phosphorous Ltd (UPL)

Description:

United Phosphorous Limited (UPL) is a leader in global food systems, reshaping the industry with OpenAg, driving sustainable growth for all. Prathamesh was the team lead driving the backend and managing infrastructure of the complete project.

Client:

UPL Limited

Technologies:

Laravel, MySQL, Linux Server Management, SSO Login, SSL Certificates

Role:

Software Engineer Innovator

Responsibilities:

- Developed and maintained CMS applications for 150+ global corporate websites, including the 2 main global websites and subsequent country websites.
- Ideated and implemented new requirements and features based on client briefs and designs.
- Collaborated with cross-functional teams to define, design, and ship new features.
- Managed their infrastructure and infra compliance requirements for their Linux servers, SSO login, and SSL certificates.
- Implemented best practices for code quality, security, and performance optimization.

Project 3: – Swimming Pool Membership System

Description:

This was an application for end-to-end swimming pool membership and pass management. It allowed users to book memberships, apply for temporary passes, and manage their profiles, transactions, and history. Admins could manage memberships, passes, users, and transactions. There was also a flow to verify identity with a government ID before membership approval, and attendance was tracked via a face recognition system.

Client:

Gov Entity

Technologies:

Laravel, MySQL, React JS, Node.js (Face Recognition Middleware), Linux Server Management, Security Audit Remediation, Yearly Security and SSL Upgrades

Role:

Software Engineer

Responsibilities:

- Worked on implementing the security measures for the application, ensuring data protection and compliance.
- Worked on Speed and performance optimization of the application for better user experience.
- Managed the deployment and maintenance of the application on Linux servers.
- Worked on major file migration to newly procured storage without hampering operations or causing data loss.
- Ensured timely upgrades of SSL certificates and other security components.
- Introduced documentation and processes to enhance the uptime and accountability of the application.
